# RISK360™
Incident & Case Management

RISK360™ is an industry leading incident case management software from G4S. Tailored to meet your specific requirements with dedicated support through its lifetime, RISK360 allows you to identify and mitigate risks, leading to reduced threats and increased site security.

The RISK360™ solution

Mitigating risk and increasing site security

RISK360 from G4S is a web based risk management software package which allow you to easily log and track incidents and manage cases to increase your security on site and mitigate risks.

The solution allows users to log-on to a wide range of incidents that have occurred on site and enables you to track and report on those incidents. Incidents can be categorised by type, time, date and location and each can be assigned to a case worker who can then be tasked with investigating the incident through to resolution.

Ongoing support, including technical demonstrations, is provided both centrally and through your local G4S manager, and is available throughout the lifetime of the solution.

CAPABILITIES

RISK360 enables you to identify where you are exposed to threat and reoccurring incidents

RISK360 empowers its users to make the working environment a better place to be. Each user can record incidents that may otherwise go unnoticed

RISK360 enables managers to compare multi-site activity and establish company-wide benchmarks of security, behaviours and deployed solutions

RISK360 will monitor the success of deployed / implemented deterrents and solutions

RISK360 can be used by both employees and G4S staff, thus permitting a wider network of threat identification and management

RISK360 is a cloud based solution, therefore requires no capital outlay and can be scaled to the demand / volume of usage by the customer

BENEFITS

Compliance - provides acurate documentation and audit reports so customers can be sure they are meeting industry specific compliance requirement
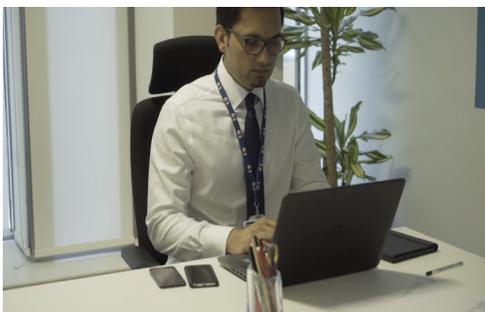

Situational Awareness - capture information from a smartphone, e-mail or by computer entry.

Person of Interest Database - searchable database of persons, vehicles and property associated with any incident

Mobility - report events in real time with ability to attach voice notes and photo

Case Management - Resolve and track internal issues

Advanced Reporting - Identifies patterns and trends occurring
