

Sustainable Procurement Policy Statement

G4S seeks to meet the needs for goods, services, works and utilities in a manner that achieves value for money on a whole-life basis, in terms of generating benefits not only to the organisation, but also to society and the economy, whilst minimising, where appropriate, damage to the environment.

The G4S supplier selection and management policies and procedures provide a framework to ensure consideration is given to the three key areas of economic, environmental, and social factors when analysing the impact of sustainable procurement.

Economic impact of sustainability, for example;

- Corporate governance
- Ethical trade
- Payment terms and compliance

Environmental impact of sustainability, for example;

- Climate change
- Carbon footprint

Social impact of sustainability, for example;

- Diversity
- Human rights
- Health and safety

It is against these three main areas that consideration is given for the consequences of design, materials, manufacture, production, logistics, service delivery, operation, maintenance, recycling, disposal and the supplier(s) capability to address these consequences.

G4S expects and encourages its supply chain partners to adopt a similar ethos to sustainability with its suppliers and subcontractors.

G4S are keen to ensure its policies and procedures for sustainable procurement are reflective of the developments made in this area and they will therefore be subject to ongoing review.
